SUMMARY

Computer Science graduate specializing in AI, with hands-on projects in NLP, agentic AI, and software quality. Built Python applications using Flask, LangGraph, RAG, and SQLite.

Currently completing Tuwaiq Academy's Software Testing & Automation Bootcamp, covering manual testing, Cypress end-to-end automation, and performance testing with Apache JMeter.

EDUCATION

Bachelor of Science in Computer Science - Artificial Intelligence

Majmaah University | Aug 2022 - Jun 2026

GPA: 4.47/5.00

SELECTED PROJECTS

BALAGH - Agentic AI & RAG Community Issue Management System

Built an Arabic community-issue management system combining deterministic triage, retrieval-augmented generation, and agentic workflows for citizen and staff use cases.

- Implemented a two-stage RAG pipeline using local knowledge sources, recursive text chunking, Ollama embeddings, vector similarity search, and source-aware retrieval.
- Built LangGraph workflows with task orchestration, retries, state persistence, cross-thread memory, and human-in-the-loop pause/resume.
- Integrated AI agents with retrieval for triage review and case recommendations; persisted reports and audit trails in SQLite.

Technologies: Python, LangGraph, CrewAI, Ollama, Qwen3, SQLite, Pandas, RAG, uv

OPINION.AI - AI-Powered Review Analysis System

Built a Flask application for collecting and analyzing customer reviews with NLP classification and a reporting dashboard.

- Applied TF-IDF and Logistic Regression with scikit-learn to classify review categories and opinion labels.
- Designed SQLite tables for users, reviews, categories, labels, and model outputs.

Technologies: Python, Flask, SQLite, HTML, CSS, JavaScript, scikit-learn, TF-IDF, Logistic Regression

Software Testing Projects - The Garage & OrangeHRM

- Designed manual test cases and bug reports for The Garage, covering positive and negative functional scenarios.
- Automated OrangeHRM end-to-end workflows with Cypress for Admin login, user and employee management, job titles, and My Info.
- Used Apache JMeter for introductory OrangeHRM performance testing and HTTP test-plan debugging.

Tools: Cypress, JavaScript, Apache JMeter

TRAINING AND DEVELOPMENT

Advanced Agentic AI Systems Engineering - SDAIA Academy | Aug 2026

Building Agentic AI Systems - SDAIA Academy | Aug 2026

Software Engineering Practices for AI Systems - SDAIA Academy | Sep 2026

Building Natural Language Processing Applications (NLP) - Tuwaiq Academy | Aug 2026

Software Testing & Automation Bootcamp - Tuwaiq Academy | Aug 2026 – Present

Samsung Innovation Campus AI Course | Sep 2026 - Present

CERTIFICATIONS

Building Transformer-Based Natural Language Processing Applications - NVIDIA | Aug 2026

TECHNICAL SKILLS

Programming: Python, SQL, JavaScript

Backend & Databases: Flask, SQLite, relational database design

Machine Learning & NLP: Pandas, scikit-learn, TF-IDF, Logistic Regression, text classification

AI Engineering & Agentic Systems: RAG, LangGraph, CrewAI, Ollama, Qwen3, embeddings, retrieval

Quality Assurance & Testing: manual testing, test case design, defect reporting, Cypress, Apache JMeter, functional, regression, E2E and performance testing, HTTP/API fundamentals

Web & Development Tools: HTML, CSS, Git, GitHub, uv

LANGUAGES

Arabic: Native | English: Proficient
