SUMMARY

Computer Science graduate specializing in Artificial Intelligence, with hands-on project experience in Python web applications, backend workflows, relational databases, NLP, and agentic AI systems. Built Flask and Streamlit applications backed by SQLite, with applied experience in machine learning and multi-agent AI workflows using scikit-learn, CrewAI, and Ollama. Combines software development fundamentals with practical experience in data-driven applications and artificial intelligence.

EDUCATION

Bachelor of Science in Computer Science – Artificial Intelligence

Majmaah University | Aug 2022 – Jun 2026

GPA: 4.47/5.00

VOLUNTEER EXPERIENCE

Data Management and Technology Volunteer | Health Volunteering Association | Jun 2025 – Sep 2025

- Created and organized a database for patient and beneficiary records.
- Supported data entry, validation, and record updates to maintain information accuracy and completeness.
- Contributed to technical infrastructure and data support for charitable and fundraising programs.

SELECTED PROJECTS

BALAGH – Community Issue Triage & Multi-Agent Review System

Built a local-first Arabic RTL system for submitting, triaging, routing, and managing community issue reports across separate citizen and staff portals.

- Developed a deterministic Python triage engine for category classification, priority assessment, service routing, duplicate detection, and missing-information checks.
- Built a sequential two-agent CrewAI workflow with read-only case tools to audit triage decisions and recommend case-management actions using a local Qwen3 model through Ollama.
- Implemented human-in-the-loop review, SQLite audit trails, report status tracking, image attachments, and operational dashboards using Streamlit.

Technologies: Python, Streamlit, CrewAI, Ollama, Qwen3, SQLite, Pandas, uv

OPINION.AI – AI-Powered Review Analysis System

Built a Flask web application that collects, stores, and analyzes customer reviews by classifying review categories and opinion labels.

- Developed backend workflows for review submission, text preprocessing, classification, and dashboard reporting.
- Applied TF-IDF and Logistic Regression to classify review categories and opinion labels.
- Designed a relational SQLite schema for users, reviews, categories, labels, and model outputs.

Technologies: Python, Flask, SQLite, HTML, CSS, JavaScript, scikit-learn, TF-IDF, Logistic Regression

TRAINING AND DEVELOPMENT

Advanced Agentic AI Systems Engineering — SDAIA Academy | Aug 2026

Building Natural Language Processing Applications (NLP) — Tuwaiq Academy | Aug 2026

CERTIFICATIONS

Building Transformer-Based Natural Language Processing Applications — NVIDIA | Aug 2026

TECHNICAL SKILLS

Programming: Python, JavaScript, SQL

Backend and Web: Flask, Streamlit, HTML, CSS

Data and Machine Learning: scikit-learn, text classification, TF-IDF, Logistic Regression

Agentic AI: CrewAI, Ollama, Qwen3, multi-agent workflows

Databases: SQLite

Tools: Git, GitHub

LANGUAGES

Arabic: Native | English: Proficient
