SUMMARY

Computer Science graduate specializing in AI, with projects in Python, agentic workflows, RAG, and NLP. Selected as a Quality Assurance Engineer for co-op training at Tuwaiq Academy after excelling in its Software Testing & Automation Bootcamp. Hands-on experience in functional testing and web test automation.

EDUCATION

Bachelor of Science in Computer Science - Artificial Intelligence
Majmaah University | Aug 2022 - Jun 2026
GPA: 4.47/5.00 | Graduated with honors

EXPERIENCE

Quality Assurance Engineer (Co-op) - Tuwaiq Academy | Oct 2026 - Present

- Test registration, operations, LMS, and student platforms on staging; analyse user stories and acceptance criteria.
- Design and execute positive, negative, and end-to-end tests across registration, enrollment, and LMS; verify admin, staff, instructor, and trainee permissions.
- Report bugs in Jira with reproduction steps, severity, and evidence; retest fixes and maintain test cases and bug reports in Excel.
- Automate web tests with Playwright; apply Cypress in testing projects.

SELECTED PROJECTS

BALAGH - Agentic AI & RAG Community Issue Management System
Built an Arabic issue-management system with deterministic triage, retrieval-augmented generation, and agentic workflows.

- Implemented a two-stage RAG pipeline with text chunking, Ollama embeddings, vector similarity search, and source-aware retrieval.
- Built LangGraph workflows with retries, persistent state, cross-thread memory, and human review; stored reports and audit trails in SQLite.

BAYYIN - Arabic Claim Review Workbench

- Built an Arabic claim-review prototype in Python and Flask, with TF-IDF retrieval against stored official-source passages.
- Kept relevance scores separate from truth assessments; added human approval, evidence versioning, and HTML/JSON exports.

OPINION.AI - AI-Powered Review Analysis System
Built a Flask review-analysis application using TF-IDF and Logistic Regression to classify review categories and opinion labels.

- Designed SQLite tables for users, reviews, categories, labels, and model outputs, with a reporting dashboard.

TRAINING AND DEVELOPMENT

Samsung Innovation Campus AI | Oct 2026 - Present
Software Testing & Automation Bootcamp - Tuwaiq Academy | Aug 2026 - Oct 2026
Software Engineering Practices for AI Systems - SDAIA Academy | Sep 2026
Advanced Agentic AI Systems Engineering - SDAIA Academy | Aug 2026

CERTIFICATIONS

Building Transformer-Based Natural Language Processing Applications - NVIDIA | Aug 2026

TECHNICAL SKILLS

Programming: Python, SQL, JavaScript
Backend & Databases: SQLite, relational database design, Flask
Machine Learning & NLP: Pandas, scikit-learn, TF-IDF, Logistic Regression, text classification
AI Engineering & Agentic Systems: RAG, LangGraph, CrewAI, Ollama, embeddings, vector retrieval
Quality Assurance & Testing: test design, functional and regression testing, Playwright, Cypress, API testing with Postman, Apache JMeter
Web & Development Tools: Git, GitHub, Jira, Excel, HTML, CSS, uv

LANGUAGES

Arabic: Native | English: Proficient
